

Signing In at FamilySearch: Improved Convenience and Security

Gregg Gibson, CIMP®

Many new FamilySearch.org visitors have already discovered that it is faster and simpler to sign up for FamilySearch using Facebook, Google, Apple, or Church account. New visitors don't need one more password and don't need to go through verification steps.

But, you may ask, what about me when I already have a FamilySearch.org username and password? Why would I ever use one of the alternative ways to sign in?

Well... we are glad you asked! Have you ever had trouble remembering and resetting your password? Have you ever wanted to get to your most frequently used websites without signing in repeatedly? Have you ever wished for more options for protecting your security and privacy? If so, this presentation is for you.

This presentation will cover many of the benefits of using alternative methods for signing into FamilySearch.org and answer questions that we have received since the alternative methods have been introduced.
