

How It Works

Specialty Scans

Digitize once. Enjoy for generations.

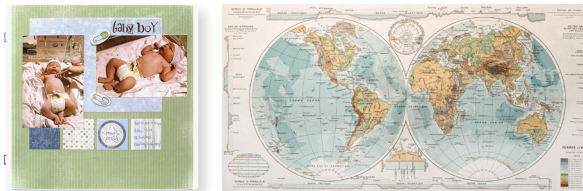

- Determine how many items you need digitized and choose your FOREVER® Digitization Box size at forever.com/services. Reach out to your FOREVER Ambassador if you need help choosing which size to purchase.
- When your Box arrives, pack it with items to be digitized. We include a step-by-step welcome guide, barcodes for your items (plus extra if you find additional items you want digitized!), and a pre-paid FedEx® shipping label. Drop your packed Box off at a FedEx location and we'll take care of the rest.
- We prioritize “do it right” quality over “push it through” volume and take every possible step to ensure the highest quality digitization. As our team of specialists carefully preserves your memories using state-of-the-art technology, you can track our progress in your FOREVER Account.
- Your digitized memories will be added to your FOREVER Account and/or a thumb drive or DVD set, depending on the option(s) you chose at checkout. Your original items will also be returned directly to you. From your FOREVER Account, you can easily view, download, enjoy, and choose to preserve your memories for generations online with FOREVER® permanent cloud storage!

FOREVER® is your permanent digital home.

Save, organize, and share ALL your memories for your lifetime plus 100 years, guaranteed, with a goal of many years beyond. Unlike other cloud storage services, we're focused on providing you with a permanent digital home that will last for generations.

Want to digitize something else?

Our FOREVER® Digitization Boxes are also perfect for professional organizers, large groups, organizations such as libraries and schools, and clients with bulk orders, custom organization requests, and specialty items such as album pages or flatbed scans.

Specialty items include:

Albums & Album Pages
Children's Artwork
Newspaper Clippings
Yearbook Pages
Historical Documents
Other Large Flatbed Scans

Detailed pricing can be found at forever.com/services.

Choose Your Box

What We Digitize

Digitize home movies, photos & more.

Each FOREVER® Digitization Box includes a set number of items that can be sent in to be digitized. If you have more, no problem! Add all your items and we will invoice you for the extra.

2 Item - Small (13" x 13" x 3")

10 Item - Medium (14" x 14" x 6")

20 Item - Large (19" x 14" x 8")

What is an Item?

1 Videotape, 25 Photos, 25 Negatives,
25 Slides, 50ft Film, or 1 Audio

Photographs

All photos up to 8" x 10" are scanned in premium quality at 600dpi and saved as a high-resolution .jpg file format, which is optimal for viewing, sharing, and enjoying your image files.

35mm Slides

All 35mm slides in plastic or cardboard sleeves are scanned in premium quality at 3000dpi and saved as a high-resolution .jpg file format, which is optimal for viewing, sharing, and enjoying your image files. All slides are hand-dusted by our technicians before scanning.

35mm & APS Negatives

All negatives are scanned in premium quality at 3000dpi and saved as a high-resolution .jpg file format, which is optimal for viewing, sharing, and enjoying your image files. All negatives are hand-dusted by our technicians before scanning.

Audio

We digitize audio cassette tapes, 8-track cassettes, vinyl records (all speeds), reel to reel audio, audio CDs, mini cassettes, and microcassettes. All audio is remastered by our in-house technicians who carefully edit out blank sections and remove hums and buzzing wherever possible to ensure that your digitized audio is crystal clear. We optimize your audio by digitizing your original files into .mp3 format, which is the most popular and versatile audio file format.

Film

We digitize 8mm, Super 8mm with sound, 16mm, and 16mm film with optical sound. We edit out all blank sections, apply color and brightness/contrast correction to your film, and adjust the audio levels to improve the clarity on reels recorded with sound. Your digitized film will play smoothly and without flickers. We optimize your film by digitizing your original files into h.264/.mp4 format, which is a widely compatible, flexible, and efficient file type used by leading broadcast media and cable providers.

Video

We digitize all consumer videotapes, including VHS, VHS-C, PAL, Hi8, Digital8, MiniDV, Betacam, Betamax, U-Matic, DVDs, and MiniDVDs. We carefully edit out all blank sections, and our technicians also apply specialized color and brightness/contrast correction to your video and adjust the audio levels to improve clarity. Look forward to reliving your home movies in the highest possible quality. We optimize your videos by digitizing your original files into h.264/.mp4 format, which is a widely compatible, flexible, and efficient file type used by leading broadcast media and cable providers.
